EDUCATION

B.E. Computer Science Engineering (Cyber Security), <i>Sri Shakthi Institute of Engineering and Technology</i> CGPA: 7.59/10	09/2023 – 09/2027 Coimbatore, India
HSC, Mangalam Higher Secondary School Grade: 85.6%	06/2022 – 04/2023 Anthiyur, Erode
SSLC, Mangalam Higher Secondary School Grade:100%	06/2020 – 04/2021 Anthiyur, Erode

TECHNICAL SKILLS

Programming Languages Python,SQL	Frontend React.js, Streamlit, Tailwind CSS
Backend FastAPI, REST APIs, Node.js, Express.js	Databases MySQL, MongoDB,PostgreSQL
Tools & Tech Git, GitHub, Docker, Linux, Metasploitable, Nmap, Android Studio	

PROJECTS

CodeInsight AI: AI-Powered Code Analysis Platform  - Built a full-stack MERN application with a Python/FastAPI microservice that runs AI code analysis (explain, bug detection, complexity, improvements) using a locally-hosted LLM via Ollama — eliminating cloud API costs. - Implemented a secure sandbox execution engine supporting Python, JavaScript, and Java with subprocess isolation, timeout enforcement, and a Dry Run feature that traces code logic without execution. - Applied 30+ security patches including JWT authentication, bcrypt hashing, rate limiting, NoSQL injection prevention, IDOR fixes, and role-based access control across all endpoints. Tech Stack: React, Node.js, Express, MongoDB Atlas, Python, FastAPI, Ollama, Tailwind CSS, Docker, REST APIs
Multi-TWS Audio Streaming system  - Built a Multi-TWS Audio Streaming system that captures Windows system audio using FFmpeg and streams it to multiple smartphones simultaneously through an OTP-secured Node.js backend. - Designed a browser-based mobile receiver, allowing users to listen without installing any app—making the solution universally accessible across Android and iOS. - Engineered a unique alternative to Bluetooth by enabling unlimited users to hear the same audio over the internet, overcoming Bluetooth's 1–2 device limitation. Tech Stack: Node.js, FFmpeg, WebRTC/WebSockets, HTML, CSS, JavaScript
MalCure: Smart Malware Response System Using CVE Intelligence  - Built an automated system that scans entire environments for vulnerabilities and maps findings to relevant CVEs. - Added capabilities to detect potential zero-day issues and prioritize all risks using CVSS. - Created automated remediation workflows that deploy patches, update configurations, and generate full audit logs with post-fix verification. Tech Stack: Python, CVE APIs, CVSS Framework, SQLite/MySQL, REST APIs, Automation Scripts
